

Data Destruction Standards

In processing data destruction contracts, we utilize DOD approved software, and perform all tasks in a controlled, secure environment.

We utilize the following methods:

- Drive Sanitization Utility:
 - Triple pass overwrites characters across the drive platters
 - First Pass writes initial character
 - Second Pass writes complementary character
 - Third Pass writes random character
 - Data is rendered irretrievable by standard recovery methods
 - Fast processing time lowers overall project costs
 - Allows multiple passes
 - Complies with DoD Standard 5220.22-M
 - No drive/partition size limitation
 - Useable on all IDE/SCSI drives

- Degaussing
 - Useable for removable storage devices
 - Utilizes a 4000 Oersted Garner Eliminator 4000 Industrial Degaussing Machine
 - Can process any magnetic storage media
 - DLT
 - DAT
 - ZIP
 - JAZ
 - QIC
 - TRAVAN
 - VHS

- Destruction/Shredding
 - If the storage medium is unable to be processed via software destruction, or degaussing, it is physically destroyed
 - Equipment is physically destroyed
 - Compliant with DoD Standards for Top Secret/Classified Material
